

Secure Case Management Platform

We're your mission partner for secure, compliant, and efficient case management.

Co-built with AWS, XQ Message, Speridian, and Strategic Communications to deliver a Zero Trust case management platform tailored for public sector agencies.

The **Secure Case Management Platform** integrates **XQ's Zero Trust data-layer encryption** and **Speridian's CaseXellence low-code platform**, hosted on AWS, to provide public sector agencies with secure, auditable, and automated document workflows. This solution ensures data is encrypted at the edge, fully traceable, and compliant with FedRAMP, StateRAMP, NIST 800-53, and other mandates.

Solve Mission Challenges

- **Manual Processes:** Automates document intake and case workflows, reducing errors and delays.
- **Data Exposure:** Encrypts data at the edge, securing it before it reaches the browser or backend.
- **Compliance Complexity:** Simplifies adherence to FedRAMP, StateRAMP, and NIST standards.
- **Limited Auditability:** Provides full chain-of-custody logs for every data interaction.
- **Hybrid Complexity:** Seamless across hybrid and on-prem..

Apply Innovative Solutions

- **Edge-to-Cloud Encryption:** XQ's policy-bound encryption secures data from creation to storage, ensuring no exposure.
- **AI-Driven Automation:** Speridian's CaseXellence leverages AWS AI (e.g., Bedrock, Comprehend) to automate document classification and streamline case processing.
- **Full Auditability:** Comprehensive logging tracks every data interaction, enhancing transparency and compliance.
- **Flexible Deployment:** SaaS or containerized deployments, for data sovereignty and compliance.

Achieve Desired Outcomes

- **Ransomware Resilience:** Eliminates extortion leverage by revoking access to stolen data
- **Continuous Protection:** Enforces Zero Trust policies across backup and production data
- **Compliance Alignment:** Supports Zero Trust, CMMC, NIST 800-171, CISA, and CJIS requirements
- **Data Visibility:** Tracks sensitive data and user activity with real-time telemetry
- **Secure Recovery:** Restores clean, policy-bound data with audit-ready integrity
- **Integrated Operations:** Unifies backup, security, and compliance into a single workflow

Benefits and Capabilities

Continuous Data Resilience Against Ransomware

- Combines immutable data in transit and storage with dynamic access control enforcement
- Neutralizes stolen data through real-time key invalidation

AI-Driven Innovation for Secure Case Management

- AI-based Automation from Speridian
- Automatically identifies sensitive data and enforces Zero Trust protection

Achieve Desired Outcomes: Unified Visibility

- Enables faster decision-making with real-time insights into risk, access, and recovery actions

Fast Adoption with Compliance Built In

- Deploys rapidly across AWS, hybrid, or on-prem environments using existing infrastructure
- Supports Zero Trust, CMMC, NIST 800-171, CJIS, and aligns with the CISA Zero Trust Maturity Model
