

XQ is Security and Governance without Constraint

We Eliminate Security Gaps Across Any Data Journey

Challenges

Cybersecurity and governance can't secure critical data from evolving threats

- 1. **More Breaches Happen By Trusting Third Parties with your Data**
 - Organizations lose control of their private data to the applications, services and networks they use.
- 2. **Organizations Risk Losses From Network Security & Governance**
 - When data is moved or shared to a new environment, it loses its protective security measures and can't be controlled.
- 3. **No Control of Stolen or Shared Files**
 - When data is stolen or shared there is no record or control over who, where, and when data is accessed, leaving the organization open to indefinite extortion, IP loss and fines.
- 4. **Governance & Compliance Complexity Slows Business**
 - Stringent privacy laws intensify the challenges of managing data across global platforms, especially in cloud environments where control over data is indirect and complex.

The XQ Message Solution

Automated Monitoring & Control of Every Data Journey with Zero Trust Data

- 1. **Universal Data Protection Across Every Environment**
 - XQ guarantees the security and control of every data record across third party, eliminating gaps in data security found in current methods.
- 2. **Use the Tools You Love, Without the Risk**
 - By separating tool access from data access, XQ secures and controls your data across all platforms, eliminating any gaps in data governance.
- 3. **Take Ransomware Extortion Off the Table**
 - XQ technology immediately blocks data access, anytime, anywhere – even in the hands of a malicious actor, guaranteeing your data cannot be exploited for extortion, giving you ultimate peace of mind.
- 4. **Automated Governance & Compliance**
 - Automated secrets management and data loss prevention provides a secure chain of custody for easy compliance on every data record.

XQ Gives Organizations Control Over Their Data Anywhere it Goes

XQ seamlessly secures and manages sensitive data across public networks, facilitating compliant access to extensive data sources. XQ enables organizations to access sensitive data across networks and storage previously inaccessible.

»» Driving Cloud Adoption

Use the cloud, but keep control of data access and sharing, removing risk and friction for moving more critical data to the cloud.

»» Zero Trust Data Sharing

XQ is a **patented** Zero Trust Data Platform that separates network and application access from data access, letting you control and monitor who views your data remotely.

»» Compliance

XQ data rights management (DRM) crosses boundaries between environments and automatically creates a unique secure chain of custody for each data record giving you the proof you need for compliance globally.

XQ Message

Zero Trust Data Security & Compliance

XQ uniquely solves specific **regulatory** issues cost efficiently

Distribution Partners	Compliance Regulation	Use Case	Market Size (Target Companies)
Microsoft	CMMC / CUI Cybersecurity Maturity Model Certification	SMB DoD / DHS Supply Chain	400,000
AWS	HIPAA Healthcare Data Protection Regulation	Healthcare EMR	140,000
Ingram Micro	GDPR EU General Data Protection Regulation	Data Sovereignty, SCHREMS II	23,000,000
	FINRA GBLA Gramm-Leach-Bliley Act - Know Your Customer	SEC Chain of Custody	18,000

Solutions

- Secure Microsoft 365 Email and OneDrive
- Secure Cloud Workloads
- Secure Forms
- Secure Data Transfer for VPN & API
- Secure Data Lake and Database
- Secure Community Surveillance Video

Select Clients

Summary

XQ is a market leader in pioneering Zero Trust Data, addressing key challenges in data control, sovereignty, and interoperability across industries. XQ’s quantum safe, crypto agile approach excels particularly in enhancing compliance and data loss prevention in critical sectors like defense, healthcare, and European data sovereignty.

Zero Trust Data API

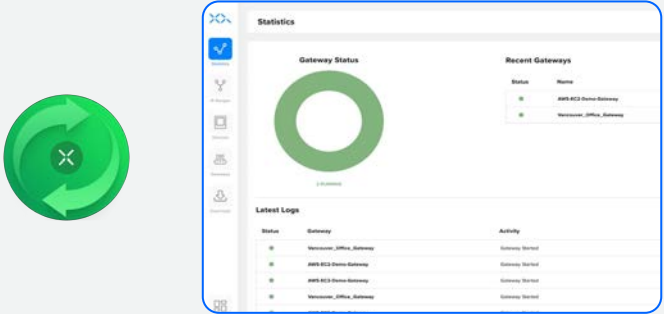

AWS Dynamo, RDS, Snowflake & Apps

Data Integrations

Zero Trust Gateway

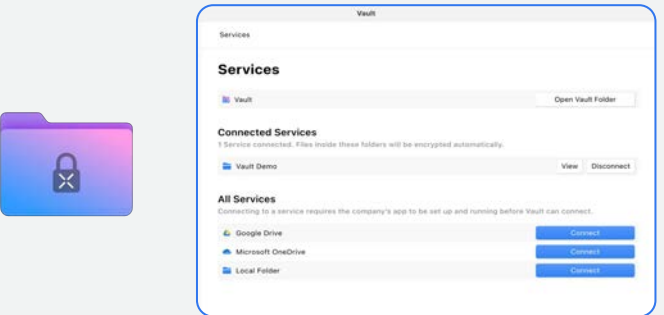

VPN Replacement & API Protection

Data in Flight

Zero Trust Data Vault

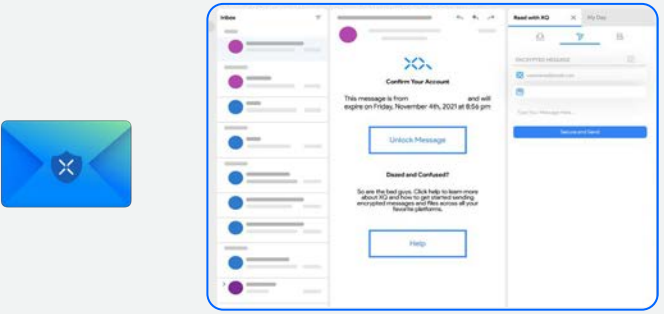

OneDrive & S3, EC2

Data at Rest

Zero Trust Email

Outlook & Gmail Email

Integrated Application Data

Zero Trust Data Security

Govern. Safeguard. Oversee.
