

Automated Zero Trust Data Governance and Protection

Automated governance intelligence. Persistent protection enforcement.

Challenges

Understanding your data, what your policies should be and who should have access is a daunting task.

- 1. Lack of Data Visibility & Access Control**
 - Most organizations lack a comprehensive inventory of their data. They struggle to map their data to relevant regulations and cannot confidently manage who has access to it, both internally and externally.
- 2. Translating Regulations into Policy**
 - Knowing which regulatory frameworks apply is only half the battle. Organizations often lack the expertise to translate these complex frameworks into actionable, enforceable internal policies.
- 3. Data Without Boundaries**
 - Organizations frequently lose control of their sensitive data as it flows through third-party applications, cloud services, and external networks—or when it is inadvertently shared or stolen.
- 4. Drowning in Signals, Starved for Insights**
 - Data classification and alerts are a starting point, but aren't enough. Without actionable insights teams are left wondering what to do next.
- 5. Compliance Bottlenecks**
 - Navigating stringent privacy laws and intricate governance requirements drains security resources and hinders overall business agility.

The XQ Message Solution

Automated Monitoring & Control of Every Data Journey with Zero Trust Data

- 1. Universal Data Governance Across Every Environment**
 - XQ guarantees continuous control over every data record across both owned and third-party environments, eliminating the security gaps left by traditional methods.
- 2. Automated Data Discovery**
 - Instantly scan and map your data to see exactly how it aligns with complex regulations and business workflows.
- 3. Automated Classification**
 - Remove the guesswork and instantly verify your compliance status.
- 4. Automated Provenance**
 - Ensure a secure chain of custody and effortless compliance for every record through integrated secrets management and DLP.
- 5. Accelerate Decisions**
 - With more reliable information in the right hands, make decisions faster.

Unifying Data Governance and Control Across Every Environment

Unlocking Data with Compliant Security:

XQ seamlessly secures and manages sensitive data across public networks. By doing so, it provides compliant access to extensive data sources, empowering organizations to safely utilize storage environments and networks that were previously out of reach.

Secure AI

XQ enables authorized users and AI systems to access the intelligence they need while ensuring sensitive information remains protected, governed, and compliant throughout its entire lifecycle.

Zero Trust Data Sharing

XQ is a **patented** Zero Trust Data Platform that separates network and application access from data access, letting you control and monitor who views your data remotely.

Edge to Cloud Sovereignty

Maintain total ownership and jurisdictional control of your data at every stage of its lifecycle—from the furthest network edge all the way to the cloud.
