

XQ Secure Vault: Cloud File Storage for Attorneys

Keep Control of Your Sensitive & Regulated Files

Share and store files from a desktop folder to cloud storage

Challenges for Legal Sector

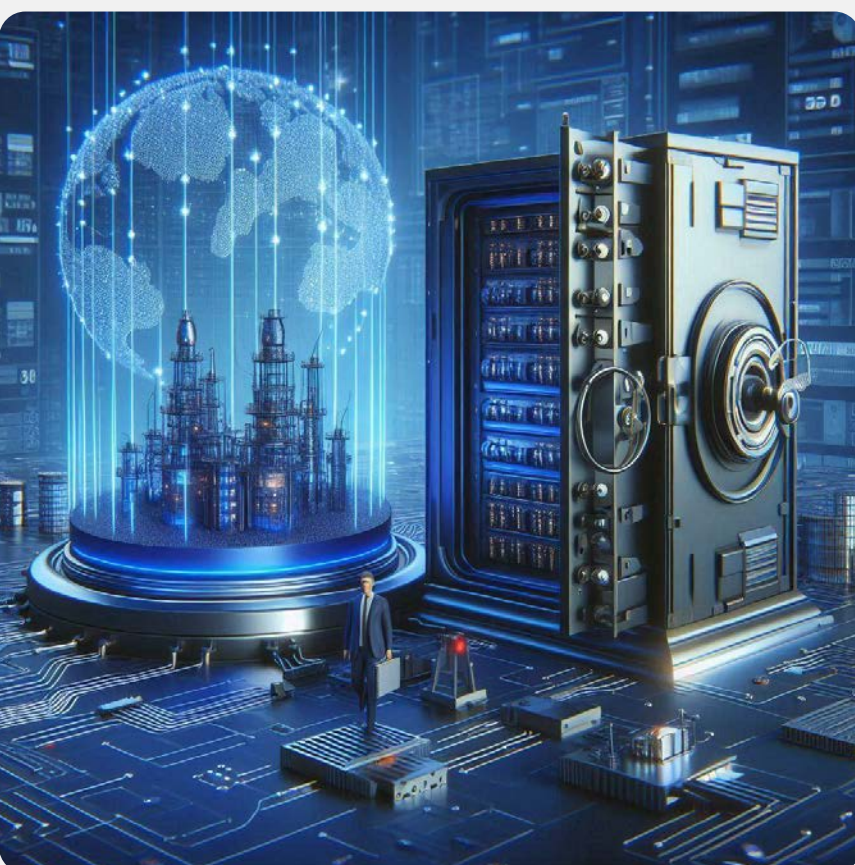

Law firms have long been prime targets for cybercriminals, with a recent rise in online fraud and theft schemes aimed at lawyers

- **Premium Target:** Attorneys hold large amounts of sensitive data, and as a result, face a daily barrage of cyberattacks.
- **Cost of Data Breach:** The average cost of a law firm data breach is around \$4.65 million.
- **Impact on Reputation:** Your search engine rankings and visits to your website can plummet and new clients will not trust your ability to keep their information safe.
- **Overwhelming Data Creation:** So much data is created that it is impossible to know who should access what data and how it should be tracked.
- **Ransomware & Insider Threats:** When data is stolen or shared there is no record or control over who, where, and when data is accessed, leaving the organization open to indefinite extortion, IP loss and fines.

Zero Trust Cloud Storage

Preserve your legal reputation with XQ Secure Vault —empowering law firms with advanced cybersecurity to protect client data and ensure confidentiality.

- **Improve Client Experience:** Easy data sharing from a desktop folder.
- **Prioritize Client Safety:** Prioritize securing client data, which is a cornerstone of trust in legal practice demonstrates a commitment to client confidentiality and regulatory compliance.
- **Maximizing Operational Efficiency:** Know what data you have and automatically control access, encrypt and label your data.
- **Remote Security for Stolen or Shared Files:** Stop ransomware extortion. XQ technology immediately blocks data access, anytime, anywhere – even in the hands of a malicious actor.
- **Automated Governance & Compliance:** Efficient SecOps automation for logging, monitoring and compliance enforcement. Secure data provenance from the source guarantees data integrity.

Fill in the Gaps that Microsoft Leaves

XQ Legal Storage Secure Vault elevates your data storage to zero trust data access (ZTDA) by microsegmenting and encapsulating your data remove access from your existing apps and networks.

»» Modernizing Client & Attorney Communications

XQ facilitates secure attorney-client discussions, regardless of location. M365 integrations protect data across platforms, deterring unauthorized access and preserving patient confidentiality.

»» Zero Trust Cloud Storage and Sharing

Zero Trust Data Vault is a seamless storage system for Linux, AWS, Azure, GCP, Microsoft One Drive, and Google Drive

»» Right to Forget Cloud Back ups

XQ offers the most efficient and secure solution for effortless compliance with Healthcare Data 'Right to Be Forgotten' regulations in cloud backups.

Advanced Secure Cloud Data Storage

Budgets are ever-tightening, but leaning on our tech will help you and your clients do more with less. More security and less cost. No more expensive consultants or retraining fees.

Large law firms typically recognize the importance of both safeguarding their systems and preparing for potential attacks. In contrast, smaller firms often mistakenly believe they're less likely to be targeted—when in fact, this couldn't be further from the truth.

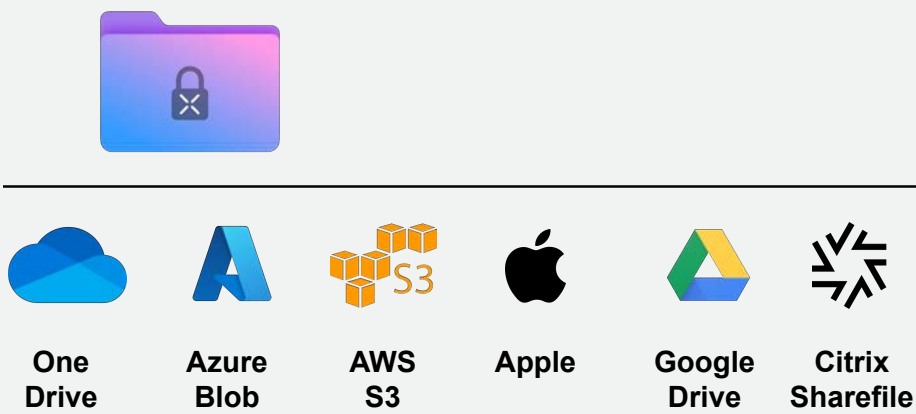

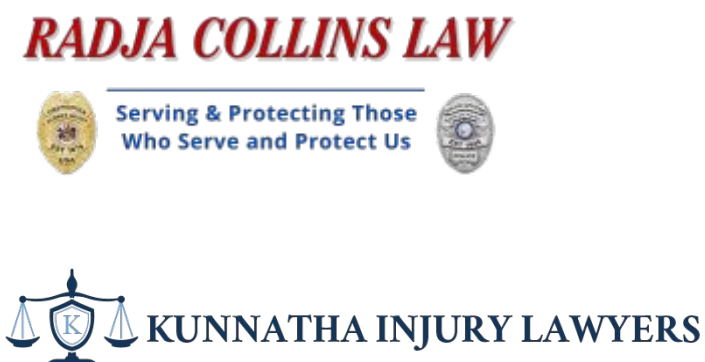

Backup Data Deletion

In cloud environments, deleting data from backups can be complex. Most regulations require that once a valid deletion request is made, data must be erased from not only primary storage but also from all backups where feasible. Some regulations allow for certain delays due to technical limitations, but they must be disclosed and resolved in a timely manner.

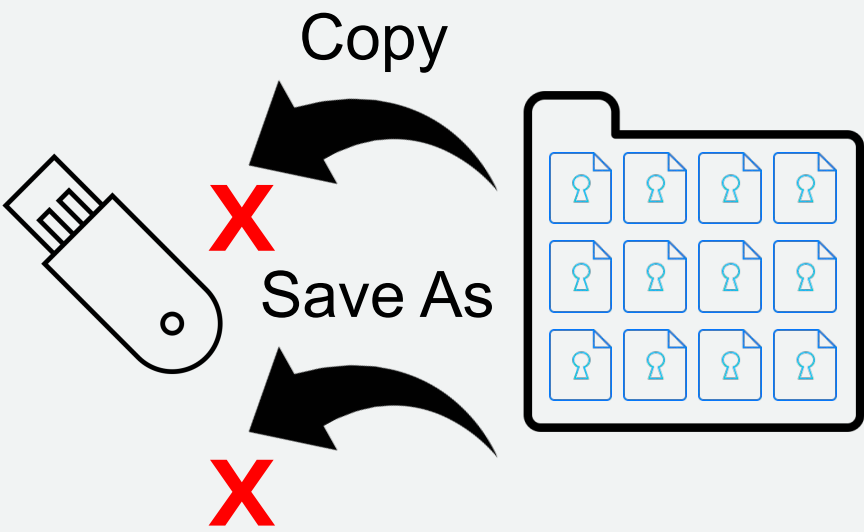

Compliance

XQ seamlessly integrates with other data services, enabling customers to maintain American Bar Association (ABA) Rule 1.6, ABA ethics opinions, State Bar of California Rule 8.4.1, FISMA, HIPAA, CCPA, Essential 8, APRA, GDPR, PCI, Gramm-Leach-Bliley Act and Pipedata compliance without the need to migrate data from their existing environment.

Trusted Solution for the Legal Industry

Stop Data Theft

Features

- Folder to Cloud Useability
- Remote Data Control
- In Country Data Sovereignty
- Simple Compliance
- Ransomware Protection
